

1

Extracting and burning fossil fuels emits greenhouse gases, like carbon dioxide, into the atmosphere.

2

Greenhouse gases accumulate and create a “blanket” that traps heat...

3

...which destabilizes our climate system. How much instability are we willing to risk?

## Let's change the game ...

Citizens' Climate Lobby wants to change the game by putting a steadily rising price on greenhouse gas pollution and returning that money to American households as a monthly dividend. Studies show that this is a fair and effective approach capable of bipartisan support.
